

I fully support XM in offering local services. It is a great effort that enhances their service. I do not support HR 4026, and do not feel that restricting localized content to local radio stations will make me listen to them ever again. I hate their staticky signal, repetetive content and advertizing. Free is never good, for a premium fee listeners should be able to get local content on demand, such as XM offers it. These are two completely separate product offers and consumer segments that choose XM over FM. HR 4026 is an obvious effort to discriminate the group of XM listeners, please stop this bill.
